* sequencing reads that have not been assembled into
confligs. Runs of N are used to separate the reads
confligs. Runs of N are used to separate the reads
and the order in which they appear is completely
arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
the record is updated, the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100 bp

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  * NOTE: This record contains 94 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Center code: WIBR

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /SIDSI/gcgdata/hold-geneseq/geneseqp-embl/AA1980.DAT:*/SIDSI/gcgdata/hold-geneseq/geneseqp-embl/AA1981.DAT:*/SIDSI/gcgdata/hold-geneseq/geneseqp-embl/AA1982.DAT:*

                                                                                                                                                                                                                                                                                                                                  AAD05300-AAD05379 represent CDNAs corresponding to 28 human secreted protein genes, and AAE01436-AAE01513 represent the protein genes, and AAE0144 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing, the genes and their secreted proteins are useful for preventing, the genes and their secreted proteins e.g., by protein or gene treating or ameliorating madical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the presence of amount of the new protein in a sample or by determining the presence of amount of the new protein in a sample or by determining the presence of amount of the new protein in a sample or by determining the presence of amount of the new protein in a sample or by determining the presence of amount of the new protein in a sample or by determining the presence of a genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of the abordary and include developing products for the diagnosis or treatment of abordary and include developing products (e.g., rheumatoid arthritis), inflammation, AIDS, autoimmuned diseases (e.g., rheumatoid arthritis), inflammation, asthma, allergies, neurological disorders, ce.g., alzehimer's diseases, comparence, sand infections. The proteins can also be used to aid wound disorders, and infections. The proteins can also be used to aid wound closure of primary tissues, to regenerate tissues, to identify their contact ligands or binding partners, and in chemotrasis, and on abordaries and one and and partners, and infections associated with the disorders and independent apporting of alleriating symptoms associated with the disorders mentioned above, and in diagnostic immunosasays e.g., radioimmunosasay or enzyme linked in diagnostic immunosasays e.g., radioimmunosasay or enzyme linked in diagnostic immunosasays e.g., radioimmunosasay or enzyme linked protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                           AAD05300-AAD05379 represent CDNAs corresponding to 28 human secreted protein genes, and AAE01436-AAE01513 represent the proteins they encode. AAE01514-AAE01544 represent human secreted protein fragments or variants. The genes and their secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 28 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, and infeases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders, disorders, schizophrenia, asthma, skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, schizophrenia, asthma, skin disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, for prevent skin aging due to sunburn, to maintein organs before transplantation, for supporting culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding pattners, and in chemotaxis, and can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunososays e.g., radioimmunosasay or enzyme linked immunosozbent assay (ELISA). The present sequence represents a human secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, psoriasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chiseases e.g. myasthemia gravis, autoimmune diabetes and autoimmune diseases e.g. myasthemia gravis, autoimmune diabetes and systemic lupus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in forensic biology, for diagnostic assays, prognostic assays, pharmacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a disorder associated with aberrant TANGO expression. A wide range
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      hegferaseqiyyenrqgyrtasv11altdgelhedlffysereanrsrdlgalyycvgv 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The Invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervopathy and lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening,

The present invention describes primer sets for synthesising 5602 full-length cDMAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligouncleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence of the comprises a 1'-end sequence of 3'-end sequence of 3'-end sequence of 3'-end sequence of an oligonucleotide which comprises a 1'-end sequence of an oligonucleotide which comprises at least 15 nucleotides and the combination of the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the particularly full-length cDNAs. The primers and also useful for the full-length cDNAs are primers allow obtaining of the full-length cDNAs are primers allow obtaining of the full-length cDNAs and 19418633 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH13632 to AAH13632 to AAH13633 to 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         the present invention.

Homo sapiens.

08-SEP-2000.

AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO cecilular be used to used to modulate cellular specification, modulate cellular adhesion. The polypeptides can be used to creat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, ulmenary congestion or cedema, emphysema, chronic bronchitis, bronchial asthma and bronchiectasis, intestinal disorders, spleen associated diseases modulate the proliferation differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral cartilage associated with the ovaries, and cerebral cartilage associated disease, multiple sclerosis, brain corers, hydrocephalus and encephalitis, and treat hepatic disease, inflammations, hydrocephalus and encephalitis, and treat hepatic disorders.

Occartilage associated does not appear in the specification; it was an experient and core and an encephalitis, and treat hepatic disorders. Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes, e.g. for treating cancer -50.1%; Score 958.5; DB 21; Length 488; 51.6%; Pred. The present sequence represents a human TANGO 216 polypeptide. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 265, TANGO 267. THE TANGO POLYpeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand
                                                                                                                                                                                  cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoietic associated disease; atelectrasis; pulmonary congestion; hematopoietic associated disease; atelectrasis; pulmonary congestion; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; latrogenic disease; inflammation; meningitis; Alzheimer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes, e.g. for treating cancer -

AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 262 calcular differentiation and/or modulate cellular adhesion, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferation, and/or function of cells modulate the proliferation, differentiation. and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchitals and bronchiectasis, intestinal disorders, spleen associated disease, modulate the proliferation, differentiation, as ischemic heart disease, modulate the proliferation, differentiation, as ischemic heart disease, modulate the proliferation, differentiation, as ischemic heart disease, with the ovaries, and cerebral oedema, cartilage cells and cerebral oedema, chronic bronch and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral concephalus, brain herniations, iatrogenic disease, inflammations, brain cancers, hydrocephalus and encephalitis, and treat hepatic disease, cerebral toxelers associated with the ovaries, and cerebral concepts the present sequence does not appear in the specification; it was created using information provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes, e.g. for treating cancer -
Alzheimer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DB 21; Length 488;

AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 262, and TANGO 267. The TANGO 260 cescribes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO cellular be used to used to modulate cellular proliferation, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder. regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, that appear in the bone marrow, and leukocytes, treat bone marrow, and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial astochamic heart diseases, modulate renal disorders, pred cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations,

```
The invention relates to isolated nucleic acid molecules encoding novel human secreted extracellular matrix proteins (5Ps). The novel human secreted extracellular matrix proteins (5Ps). The polynucleotides and proteins are used to prevent, treat a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. For example, disorders associated with decreased expression of SPs. The SP polynucleotide or a vector expressing them may be administered to dreat diseases by gene therapy. Antisense molecules may be administered to down regulate expression of SPs by binding with the cells own genes and preventing their expression. The polynucleotides may also be used as DNA probes in diagnostic assays. The SPs may also be used to dreat the anti-(SP) antibodies and antagonists may also be used to down regulate expression and activity of antagonists may also be used to down regulate expression and activity of SP and as diagnostic agents for detecting the presence of SPs in samples. The disorders include for example: immune/discases (e.g. HIV) (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis, cancers and hyperproliferative disorders (e.g. melanomas, neoplasms of the breast or liver, Sezary syndrome and caucher's disease), neurological diseases (e.g. Alzheimer's disease, Parkinson's disease) cardio-/cerebrovascular disorders (e.g. cardiac arrest, tachycardia and angina), infections caused by bacteria, viruses and fungi and ocular disorders (e.g. corneal infections). Other uses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ä

AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 260 cellular proliferation, modulate polypeptides can be used to modulate cellular adhesion. The cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Wilebrand factor-associated disorder, requilate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferation, modulate cellular interaction, differentiation, and/or function of cells and hematopoietic associated diseases and disorders, atelectasis, that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, spleen associated diseases, modulate renal disorders, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as interaction of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, latrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's blasease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders note: the present sequence does not appear in the specification; it was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MHEGFERASEQIYYENRQGYRTASVIIALTDGELHEDLFFYSEREANRSRDLGAIVYCVG 179

```
AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO Collular differentiation and/or modulate cellular adhesion. modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Wilebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate the proliferation, differentiation, and/or function of cells matrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, and hematopoietic associated diseases and disorders, spleen associated diseases. Modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate trenal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral codema, hydrocephalus, brain hermiations, iatrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, inflammations, bydrocephalus and encephalits, and treat hepatic disorders, the present sequence does not appear in the specification; it was considered the proliferation of the constants.
                   hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchietestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; lschemic heart disease; hydrocephalus; brain herniation; latrogenic disease; inflammation; meningitis; altrogenic caracteristic parkinson's disease; authorized parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               60 NEIYYFVEQLAHKFISPQLRMSFIVFSTRGTTLMKLTEDREQIRQGLEELQKVLPGGDTY 119

The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO 260 polypeptides can be used to modulate cellular proliferation, modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferation disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells

                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, psoriasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's disease, osteoarthritis, Lyme's disease, cachexia and autoimmune diseases, osteoarthritis, Lyme's disease, cachexia and systematic lupus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial Carnosic biology, for diagnostic assays, prognostic assays, pharmacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a clistorder associated with aberrant TANGO expression. A wide range of cellular disorders can be treated.
                                                                                                                                                                                                                                                                  Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  187 QLARIADSKDHVFPVNDGFQALQCIIHSILKKSCIEILAAEPSTICAGESFQVVVRGNGF 246

## ALIGNMENTS

```
-:- SUBCELLUIAR LOCATION: Type I membrane protein (Probable).
-:- ALTERNATIVE PRODUCTS: 4 isoforms; 1 (shown here), 2, 3 and 4; seem to be produced by alternative splicing.
-:- TISSUE SPECIFICITY: Highly expressed in tumor endothelial cells but not in normal endothelial cells.
-:- DOMAIN: Binding to PA seems to be effected through the VWA domain.
-:- SIMILARITY: BELONGS TO THE ATR FAMILY.
-:- SIMILARITY: CONTAINS 1 VWFA DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Okamoto S.,
